State Government Identity Credential & Management Solutions

Leading the way in remotely managed and trusted identity enrollment, credentialing and management solutions.
NextgenID® is the leading provider of Trusted Identity Assurance, Management and Smart Card Credentialing solutions to State Government. The NextgenID Trusted Identity Assurance & Management Ecosystem (NGID*TRUST Platform) is a certified, approved and deployed system that specifically addresses State Government enterprise identity compliance issues and needs.

The NGID*TRUST Platform directly addresses these challenges at all levels throughout the cardholder and credential lifecycle including enrollment, adjudication, issuance, authorization, operational use and update through a secure certified managed service offering (MSO). NGID*TRUST combines people, process and technology to deliver a proven solution that has generated remarkable success at the enterprise level for State Government. Whereas many others, including some of the largest government contractors in the world with tremendous resources and virtually unlimited staff have failed, and are dissolving their smart card programs, NextgenID® has built a reputation for innovation, success and achievement in this space. Our success is predicated on having designed, implemented and currently managing the largest State Personal Identity Verification – Interoperable (PIV-I) credential program in the country, within the State of West Virginia.

ABOUT NGID
The NGID*TRUST Platform also delivers automated enterprise enrollment and card issuance capabilities for the physical and logical operational use of smart cards in Government EPACS systems. This capability includes two factor authentication for secure network authorization without passwords, time and attendance reporting, physical access to buildings and parking facilities with full reporting and alerting capabilities, people tracking and mustering in government buildings.

Protecting and securing State assets such as facilities, computers and data information systems are a primary responsibility. To ensure consistent implementation across the State, a standardized identity credential should be designed to enhance security, reduce identity fraud for all citizens, protect the personal privacy of those issued government identification and allow for interoperability and instant identification between Law Enforcement officers, Homeland Security personnel, Emergency Management staff and First Responders across the State.
NextgenID solutions provide State Agencies, including associated Municipal and County operations, with interoperable identity management and credentialing solutions that provide end-to-end services to effortlessly enroll applicants, issue secure credentials, and manage the complete lifecycle of these credentials, including integration of Agency specific programs into the smart card. NextgenID delivers a managed, shared service solution that simplifies the process of procuring and maintaining federally compliant Homeland Security Presidential Directive (HSPD-12) certified credentials, while at the same time, meeting HSPD-12 compliance for issuing the credentials.

NextgenID has developed a comprehensive end-to-end managed ID service to issue fully compliant identity credentials for State employees, associated contractors, Emergency Management personnel and citizens. State Agencies benefit from a centralized, streamlined and efficient operational program infrastructure, technical expertise, and economies of scale for credential management. The NGID*TRUST Platform delivers a key structural component to assist State agencies in unifying their logical (computer) and physical (building) access control systems as per implementation plans.
NextgenID® solutions address the challenges associated with reliably assuring personal identity for:

- Biometric Identification on the card
- ID Badge access and reporting for buildings & parking areas
- Financial Systems Stability
- National, State and Local Emergency Response, Safety & Security Interoperability
- State-wide & Agency-wide Streamlined Program Enrollment
- Agency Interoperability with customized privacy measures
- eGovernment and eHealthcare initiatives including digital signature and encryption capabilities
- Customizable to support any State initiatives achievable via unique ID credential
- Two factor authentication for network authorization, eliminating the need for passwords on State networks
- A State-wide (city, county, school) "ONE CARD" ID solution providing custom Time and Attendance tracking and reporting tools based on Agency requirements
- Federal HSPD-12 Identity Compliance, Healthcare workers and suppliers ID and medical information on card
- Multiple Citizens State Benefit Programs – contained within the smart card and accessible only by certified parties

www.nextgenid.com
NextgenID’s proven NGID*TRUST Platform delivers a cost effective approach that is designed to support multiple stakeholders on a single system. It avoids each Government agency from having to issue its own ID cards and eliminates identity fraud, curtails misrepresentation, and prevents identity theft. It provides biometrics and independent attribute modules making each issued card unique; adding a technical solution to the privacy challenge. With the implementation of the NGID*TRUST Platform, additional initiatives such as eCommerce, eHealth, and eGov become viable to meet all current and known future Government security and identity mandates.
